Innovation Moving Forward

Extreme Trailers LLC are experts in trailer design & manufacturing. Our innovative aluminum trailers provide outstanding performance for fleets and owner-operators. Available in flatbed and drop-deck configurations, our products deliver increased payload capacity, lower operating costs, and long-term durability.

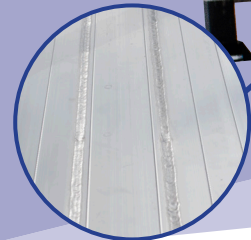

- **X-Lite™, X-Caliber™, and X-Force™ are up to 15% less tare weight**
- **Patent-pending crush-resistant (CRT) decking design**
- **Saves on fuel and tolls**
- **Reduced maintenance costs**
- **Enhanced revenues**

Extreme-T™

Our Patent-pending heavy duty hook features a multi-position, load security system that spans the length of the trailer. For use with chains or straps. It will not cut into or deform the anchor point.

Patented decking is 35% to 50% stronger

Our patent-pending CRT™ (Crush Resistant Technology) enhances the strength and durability of the floor decking. The extruded aluminum floor is crush resistant and welds to the top flange of the main beam, creating a stronger beam section while reducing weight.

Sliding axles available for all applications

We offer lengths up to 53', and widths 96" and 102". Concentrated load-rating ranges are 55K, 65K and 75K in a 4' area. Also available with low deck height. SPIF configurations are also available for operations in Canada and Michigan.

Light Panel Features

The easily accessible service panel makes future maintenance fast and easy.

Rear Under Ride

Features a bolt-on attachment for ease of maintenance and servicability.
